THE RECYCLING NETWORK

Reporting What You Recycle: The IRN Difference

Nobody reports recycling results as quickly or accurately as IRN.

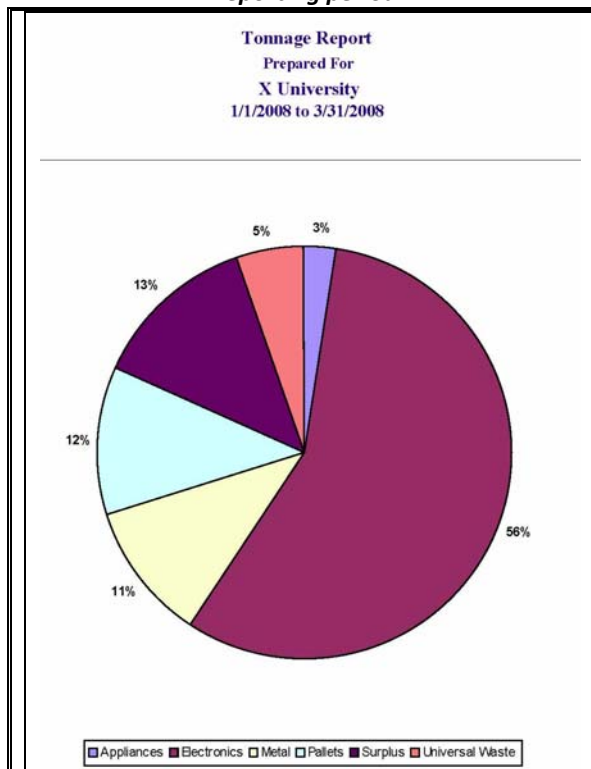

No matter how much you recycle, recycling isn't successful unless you can report results, document costs and benefits, demonstrate progress over time. This is a huge problem for many recyclers. It's not a problem for anyone who uses IRN services.

Every time you place a Service Request, the information is entered into our transaction management system. When we do the pickup, we record material quantities and composition within 48 hours. There are no exceptions.

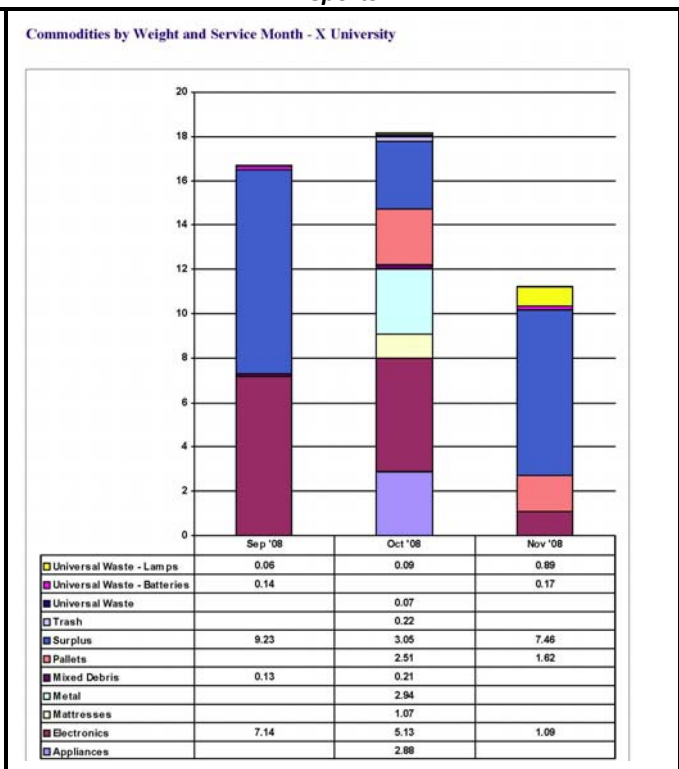

As soon as the information is in the system, we can report it back to you. That is, within two days of any transaction, you can get complete documentation – quantity and composition – of every material we picked up. At the end of any month or quarter, you can get a complete report of everything we've handled for that period. If your director or CFO asks for a current and complete status report on your entire recycling program, at any time, you can have that on demand.

We provide reports in multiple formats, and we can produce special reports as requested:

This is a pie chart that breaks out how much has been recycled of different materials for a given reporting period.

This bar chart tracks recycling over time, material-by-material. This is one of our standard monthly or quarterly reports.

IRN

THE RECYCLING NETWORK

Here is a summary of materials recycled over a range of dates. We can do this for one time period or many.

We can provide detailed documentation, transaction-by-transaction or summed by material and time period, for every material we pick up.

Tonnage by Commodity - X University				Tonnage/Order By Month and Year						
7/1/2008 to 12/31/2008				September 2008						
Commodity	# Orders	Tonnage		Month/Bill To	Classification or Commodity		# of Orders	Tonnage		
Appliances	4	1.93	2.2%	Boston Medical Center						
Appliances - Mixed	3	1.03	1.2%		Electronics	31596 9/17/2008	2.31	2	3.81

						Organization Totals		2	1.17	
						November 2008 Totals		2	1.17	
						Report Total		15	10.01	

IRN can also put your recycling data into Excel or another flat-file format so you can store, tabulate, and report on results using your own software, insert data into presentations, or put it up on your web page.

Our system routinely reports information on the materials we handle. But we can also manage and report data on other materials as well – other recyclables not handled by IRN, even your trash. That is, if you'd like to have comprehensive information management and reporting on your entire solid waste stream, whether or not individual materials are handled by IRN, we can provide it: all you reuse, all you recycle, all you compost, all you throw away. We already have the data management and reporting capabilities; all we need is your numbers.

It's another instance of IRN responding to member and client needs. Especially with tight budgets and increasing attention to Sustainability, accurate and timely reporting is absolutely critical.

And nobody provides reports better or faster than IRN.
